

# EMPLOYEE MANAGEMENT SYSTEM

SANKAR M (RA2211031010024)

ANAND BALAJI S N (RA2211031010012)

GIRISAI S (RA2211031010009)

# INTRODUCTION

- An Employee Management System (EMS) is a comprehensive and integrated software solution designed to streamline and optimize the various aspects of managing an organization's workforce. This system plays a crucial role in enhancing efficiency, transparency, and overall productivity within a company by automating and centralizing employee-related processes.
- The primary objective of an Employee Management System is to simplify the human resources (HR) functions, enabling organizations to manage their workforce more effectively. This system encompasses a wide range of functionalities, including but not limited to the database for storing and managing essential employee information, such as personal details, contact information, job history, and qualifications.

# OBJECTIVE

- The objective of this work is to give a complete approach to personnel information management. This will be accomplished by developing and deploying an HR management system that will result in a significant shift in the way employee data is managed.

This system's objectives include the following:

- Design of an HR management system to meet needs such as adding and deleting employees, viewing and printing employee data, and updating employee information.
- Employee data is stored in a well-designed database.
- An easy-to-use interface that will let user interact with the system.

- Availability – All the employee details stored permanently in the database admin can see the data, whatever needed.
- Maintain Cost – Reduce the cost of maintenance. It is standalone application so no required of cost for maintain
- **Enable Real-time Updates:** Implement features that allow real-time updates of stocks availability and member activities, ensuring the information is always current and reliable.
- **Ensure Security:** Implement robust security measures to protect member information, ensuring data privacy and confidentiality.

# ALGORITHM

- First we need to have the proper jdk and ide for the purpose of coding and eclipse is used for the same. Mysql database is used for the maintenance of data that is being stored in the library for example the books the students and so on.
- Now, we need to connect java and the database which is Mysql for the purpose of showing the data in a proper format and also for accessing the data. For this we use an appropriate jdbc connector and in this case it is mysql-connector-j-8.1.0.jar.
- Now we create the application using java swing modules and for this purpose the window builder library is installed.
- Now, the consequent classes and the connection between the data in mysql and the main program is being done.

- **Initialize Employee Database:**
  - Create a database to store employee information.
  - Define data fields for each employee, such as ID, name, contact details, job title, department, etc.
- **Add Employee:Collect**
  - employee details (ID, name, contact information, etc.).
  - Verify that the employee does not already exist in the system.
  - Add the new employee to the database.
- **Update Employee Information:**
  - Identify the employee to be updated.
  - Display current information and provide options for modification (name, contact details, etc.).
  - Update the database with the modified information.

- **Remove Employee:**

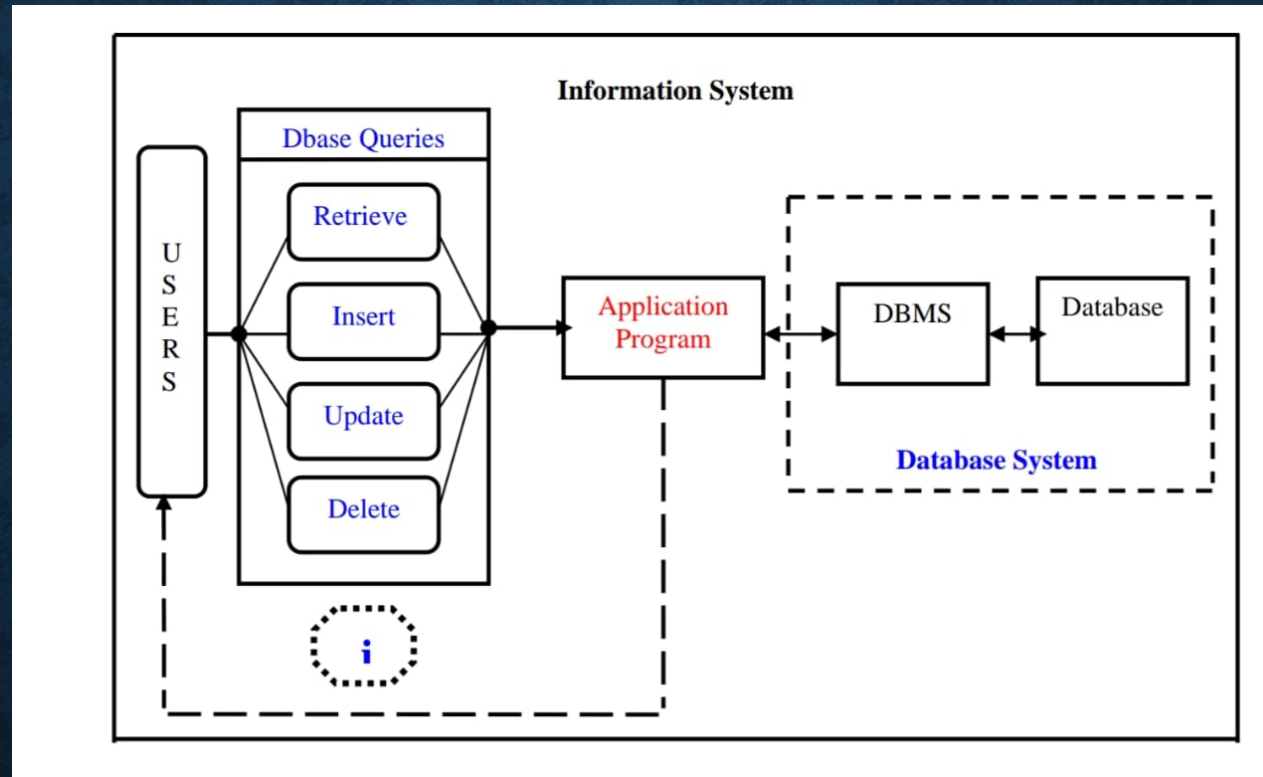

- **Identify the employee to be removed.**
- **Confirm the deletion with appropriate permissions.**
- **Remove the employee from the database.**

# LITERATURE REVIEW

S.No	Author	Title	Inference	Drawback
1.	<a href="#">Ferdianto</a> ; <a href="#">Lius Steven Sanjaya</a> ; <a href="#">Titan</a>	<b>Design of Employee Management Application for Small Medium Enterprise</b>	The research seeks to develop an application for SMEs, employing SDLC, literature review, and interviews, to streamline employee management tasks and enhance SME owners' access to data and attendance monitoring.	One potential drawback is that the implementation of the information technology system may face resistance or challenges in terms of employee adaptation and initial integration into existing company processes.
2.	Mayur Dange, Ashwini Bahadure, Priti Rathod, Rani Kanhekar, Rohini Guldagad, Prof.P.R.Patil	<b>Advance Employee Management System</b>	The project aims to streamline and centralize human resources management by developing an advanced employee management system with features catering to both managers and employees, enhancing efficiency and accessibility in handling various HR-related tasks.	One potential drawback is the initial cost and time investment required for implementing and training personnel on the advanced employee management system, which could pose challenges for smaller companies with limited resources.
3.	<a href="#">Ipshita Pal</a> ; <a href="#">Rohan Basak</a> ; <a href="#">Aprataikya Bandyopadaya</a> ; <a href="#">Titlii Ghosh</a> ; <a href="#">Mili Sarkar</a>	<b>Design of a employee management system</b>	It aim for the collection of data in sequence order,user friendly	The draw is that it has many bugs ,which can be easily hacked and it doesn't print the employee informarion

# ACTIVITY DIAGRAM

# MODULES DESCRIPTION

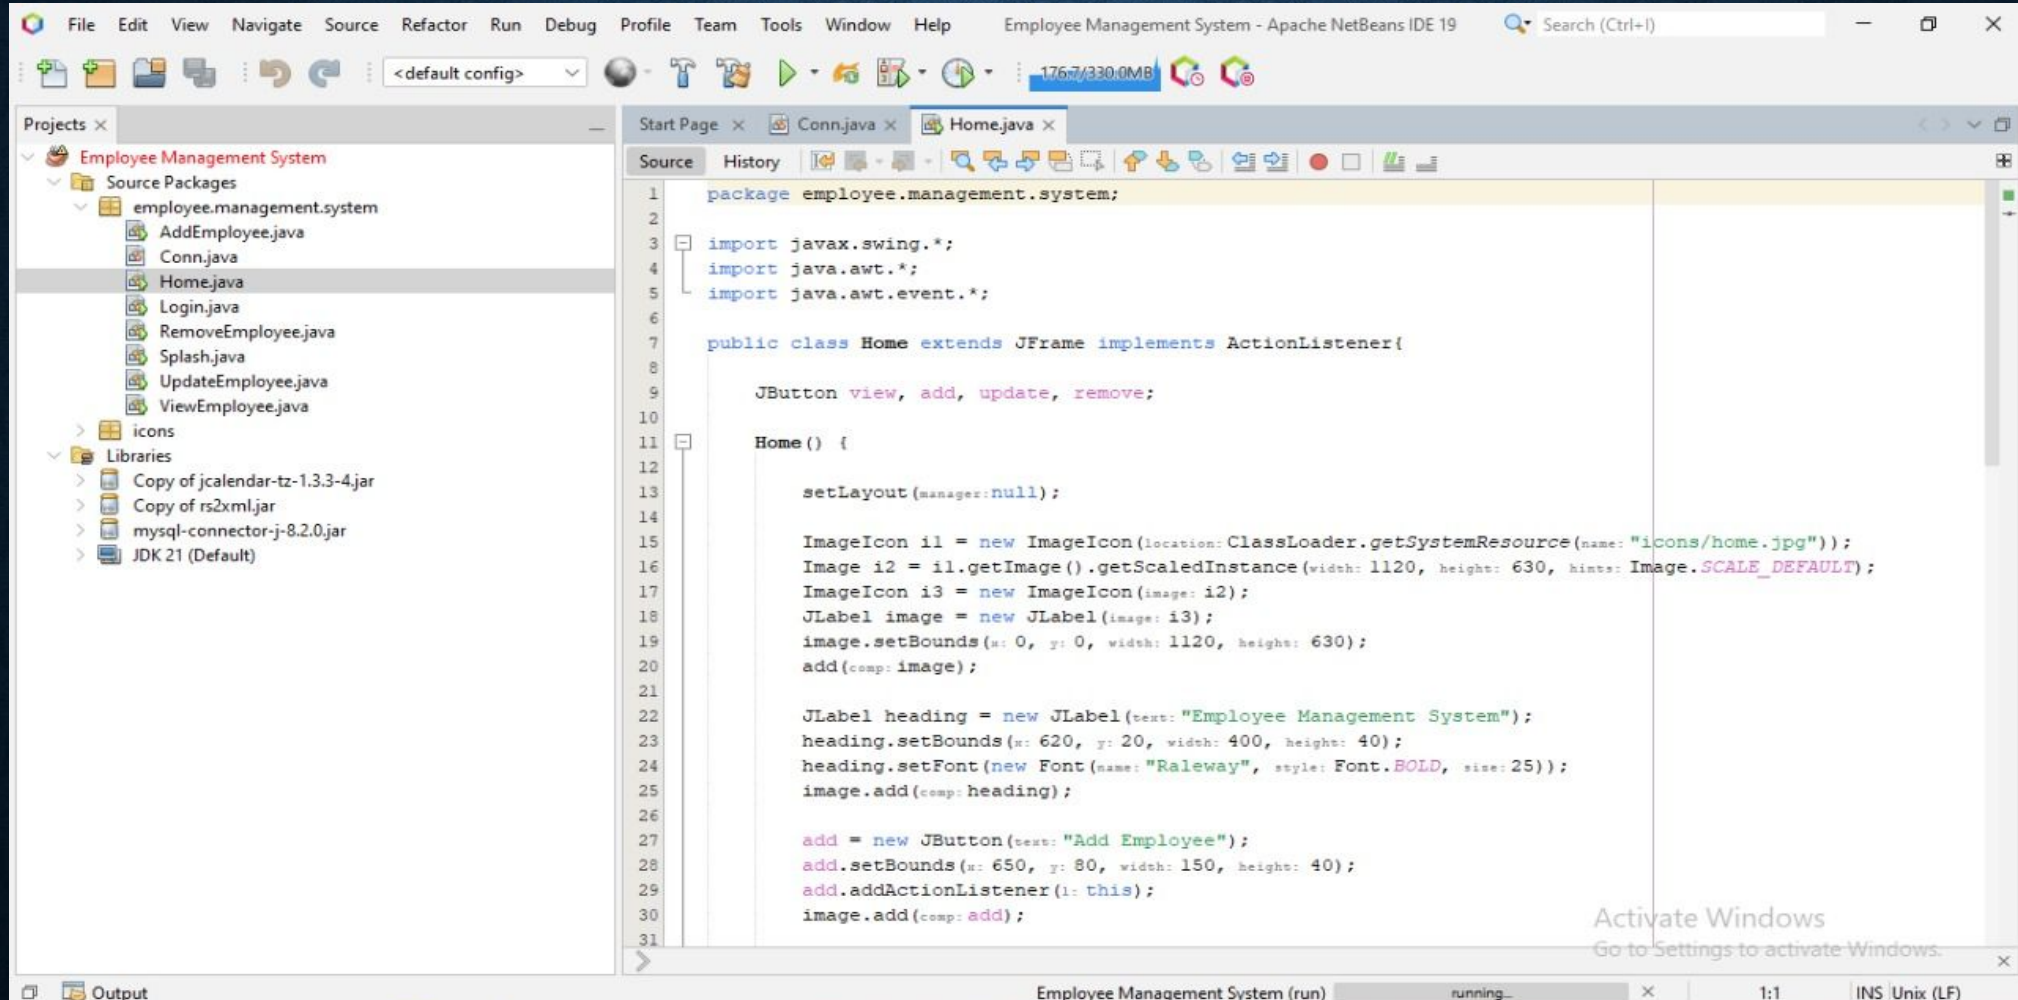

- Login frame – This is the login frame of this system where user have to enter the required credentials to have access for the main dashboard.
- Main Dashboard – After login in, user is directed to the main dashboard of this system where user can perform various operations like adding an employee, deleting an employee
- Add employee – Here user have to enter all the required credentials to add a new employee to the system.

- Remove employee – User has to enter the employee id in order to delete his information from the system.
- View and update employee – In order to view and update employee information, the user have to enter employee ID.

A screenshot of a web application window titled "Employee Management Form". The window has a white background and a blue border. On the left side, there are four labels: "Employee Id", "Name", "Phone", and "Email". To the right of each label is a text input field. The "Employee Id" field contains the value "742772" and has a dropdown arrow on its right. The "Name" field contains "sankar", the "Phone" field contains "rtesr", and the "Email" field contains "sankar". Below these fields are two black buttons with white text: "Delete" and "Back". On the right side of the form is a large illustration of four people (three men and one woman) sitting at a long table, working on laptops. The illustration is in a flat, colorful style. The window has standard Windows window controls (minimize, maximize, close) in the top right corner.

Employee Id	742772
Name	sankar
Phone	rtesr
Email	sankar
